

Problem Statement

The food and restaurant industry generates a large amount of transactional data every day. Analyzing this data is essential for understanding customer purchasing behavior, identifying sales trends, evaluating product performance, and improving overall business operations.

This project focuses on analyzing pizza sales data using SQL to uncover meaningful business insights related to revenue generation, customer ordering patterns, sales performance, and customer preferences.

The goal of this analysis is to transform raw sales data into actionable insights that can help businesses make informed decisions, improve operational efficiency, optimize product offerings, and increase overall profitability.

Project Objectives

The primary objectives of this project are:

Analyze Overall Business Performance

Evaluate key business metrics such as total revenue, total orders, total pizzas sold, and average order value to understand the company's sales performance.

Understand Customer Ordering Behavior

Analyze customer purchasing patterns by studying daily and hourly order trends to identify peak business hours and high-demand days.

Identify Best-Selling and Low-Performing Products

Determine the top-performing and least-performing pizzas based on total quantity sold to support product and marketing decisions.

✓ Evaluate Category-Wise Sales Performance

Analyze pizza sales across different categories and sizes to understand customer preferences and revenue contribution.

✓ Generate Data-Driven Business Insights

Use SQL queries to transform raw transactional data into meaningful business insights that support better decision-making.

✓ Improve Operational and Sales Strategies

Provide insights that can help businesses:

- optimize inventory management
- improve promotional campaigns
- manage staffing efficiently
- enhance customer satisfaction
- increase profitability

Expected Outcomes

By performing this analysis, the business can:

- ✓ Monitor overall sales performance effectively
- ✓ Identify peak sales periods and customer demand trends
- ✓ Understand customer preferences for pizza categories and sizes
- ✓ Improve product-level sales strategies
- ✓ Support strategic business decision-making using data analytics
